8	<b>A brief discussion</b>	<p>The word 'pandemic' comes from the Greek '<i>pandemos</i>'. 'Demos' means the population and 'pan' means everyone. So, '<i>pandemos</i>' is a concept where the world's population will likely be exposed to the infection and potentially a large proportion of them will fall sick. A pandemic is defined as the "worldwide spread" of a new disease. In 2020, the whole world has faced the Covid-19 pandemic. All the academic scientists, faculty members, research scholars, students, who were present in the webinar on "<b>Scientific Approaches Towards COVID-19 Pandemic</b>", participated actively through exchanging and sharing their experience on Covid-19 pandemic from all aspects of physical, chemical, biological and mathematical point of view. During this pandemic, the new realities of working from home, temporary unemployment, home-schooling of children, and lack of physical contact with other family members, friends and colleagues take time to get used to. Adapting to lifestyle changes such as these, and managing the fear of contracting the virus and worry about people close to us who are particularly vulnerable, are challenging for all of us. This webinar provided a premier interdisciplinary platform for researchers, practitioners and educators to discuss the most recent innovations, trends and practical challenges adopted to fight against this COVID-19 pandemic in Scientific domain.</p>
